

GEMÜ Code 54 PTFE/EPDM diaphragm

Features

- Fabric reinforced EPDM backing
- Simple mounting thanks to the rubber pin that is vulcanized in place (diaphragm size 8)
- Simple and defined mounting thanks to the threaded pin that is vulcanized in place with integrated screw-in stop (diaphragm size 10 to diaphragm size 100)

Description

The GEMÜ code 54 diaphragm consists of a PTFE face and a peroxide-cured EPDM backing, which are securely connected to one another (fully laminated). An FKM backing is also available for highly permeating media (GEMÜ code 56). The diaphragm combines all the advantages of PTFE with the flexibility of an elastomer diaphragm in one product. In order to optimize the entire system, both the PTFE face and the diaphragm backing are compounded for GEMÜ and manufactured within the GEMÜ Group.

Technical specifications

- **Diaphragm materials:** PTFE/EPDM
- **Diaphragm sizes:** 8 | 10 | 20 | 25 | 40 | 50 | 65 | 80 | 100 | 125 | 150
- **Conformities:** BSE/TSE | FDA | Oxygen | Ozone resistance | Reg. (EU) No. 10/2011 | Regulation (EC) No. 1935/2004 | TA Luft (German Clean Air Act) | USP

Technical data depends on the respective configuration

1) The duration of sterilization is limited for some diaphragms; see technical data.

Each application must be analysed before the selection of the diaphragm material. Since the most varied operating conditions often prevail within a plant at different locations, it can be necessary to use different valves and materials. In particular, the chemical properties and the temperature of the working media often lead to different interactions. The suitability of the materials used must therefore always be examined individually with regard to the current resistance list or checked by an authorised specialist. Only this procedure guarantees that the application will operate safely and economically for a longer period. Diaphragms are wearing parts. They need to be regularly inspected and replaced otherwise malfunctions can occur, possibly resulting in hazardous situations.

Please note: The maintenance intervals for inspecting and replacing diaphragms are application-dependent. In order to determine a suitable maintenance interval, the maintenance history and the stresses placed on the parts due to frequent sterilisation or frequent cycle duties must be taken into account.

Product description

Construction

Diaphragm size 8

Diaphragm size 25

Item	Name
1	Threaded pin vulcanized in place with integrated screw-in stop
2	EPDM back
3	Tab
4	PTFE face
5	Sealing bead for reliable sealing on the valve weir
6	Rubber pin

GEMÜ CONEXO

The interaction of valve components that are equipped with RFID chips and an associated IT infrastructure actively increase process reliability.

Thanks to serialization, every valve and every relevant valve component such as the body, actuator or diaphragm, and even automation components, can be clearly traced and read using the CONEXO pen RFID reader. The CONEXO app, which can be installed on mobile devices, not only facilitates and improves the "installation qualification" process, but also makes the maintenance process much more transparent and easier to document. The app actively guides the maintenance technician through the maintenance schedule and directly provides him with all the information assigned to the valve, such as test reports, testing documentation and maintenance histories. The CONEXO portal acts as a central element, helping to collect, manage and process all data.

For further information on GEMÜ CONEXO please visit:

www.gemu-group.com/conexo

Ordering

GEMÜ Conexo must be ordered separately with the ordering option "CONEXO".

For electronic identification purposes, each replaceable component contained in the product you have purchased is equipped with an RFID chip (1). Where you can find the RFID chip differs from product to product.

Technical data

Medium

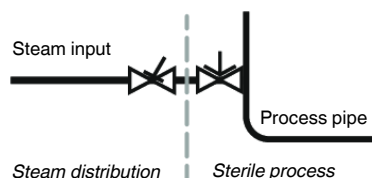

Working medium: Corrosive, inert, gaseous and liquid media which have no negative impact on the physical and chemical properties of the body and diaphragm material.

Temperature

Media temperature: 14 – 212 °F
with special function S: 14 – 140 °F

Sterilisation temperature: max. 300 °F ¹⁾, no time limit per cycle ²⁾

- 1) The sterilisation temperature is only valid for steam (saturated steam) or superheated water.
- 2) PTFE diaphragms can also be used as steam barriers; however, this will reduce their service life. This also applies to PTFE diaphragms exposed to high temperature fluctuations. The maintenance cycles must be adapted accordingly. GEMÜ 555 and 505 globe valves are particularly suitable for use in the area of steam generation and distribution. The following valve arrangement for interfaces between steam pipes and process pipes has proven itself over time: A globe valve for shutting off steam pipes and a diaphragm valve as an interface to the process pipes.

Storage temperature: Maintain at 14–77 °F (preferably 59 °F)

Pressure

Operating pressure: max. 150 psi (dependent on the diaphragm valve used)

Vacuum: Can be used up to a vacuum of 2.1 inhg (absolute)

Product compliance

Food: Regulation (EC) No. 1935/2004
Regulation (EC) No. 2023/2006
Regulation (EC) No. 10/2011
FDA
USP Class VI Title 87
USP Class VI Title 88 (50 °C and 121 °C)
Japanese Food Contact Material Act

Ozone resistance: Diaphragm material is resistant to a maximum concentration of ozone of 0.2 mg/l (dissolved in water)

TA Luft (German Clean Air Act): The product complies with the equivalence requirements of section 5.2.6.4 of the German Clean Air Act (TA Luft / VDI 2440 according to section 3.3.1.3)

Oxygen: BAM compliant, the product is suitable for application with oxygen

BSE/TSE: The product conforms to EMA/410/01 revision 3 and is free of animal substances

Unused components:	Asbestos
	Natural or synthetic latex
	PVC
	2-Mercaptobenzothiazole
	Benzophenone
	Bis(2-ethylhexyl) phthalate (DEHP)
	Bis(n-butyl) phthalate (DnBP, DBP)
	Bisphenol A (BPA)
	Butyl benzyl phthalate (BBP)
	Diethyl phthalate (DEP)
	Diisodecyl phthalate (DIDP)
	Diisononyl phthalate (DINP)
	Dimethyl phthalate (DMP)
	Di-n-octyl phthalate (DNOP)
	N-Nitrosamine

Mechanical data

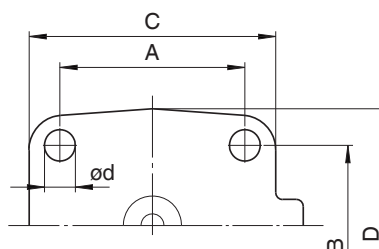

Service life:	Max. recommended service life, 8 years
	The service life is the sum of the storage life and operating life.
	Note the Technical Information "Service life, storage and marking of GEMÜ diaphragms".
