

General Certificates of Conformity

Analogous to the requirements of the official journal of the European Union (EMEA/410/01 Rev.3) GEMÜ confirms that they have introduced fundamental steps for minimizing the risk of transmission of TSE/BSE pathogens.

After examination of the whole production process a list of all media wetted substances and auxiliary materials was completed. We subsequently asked the suppliers of these materials or products whether they are free of animal compounds and obtained certificates of conformity with this requirement.

If this property could not be confirmed, we used replacement conforming products as permitted by the production process.

In order to ensure the far-reaching measures in the company, work methods, procedures and operating instructions were created for all the departments in the regulated area concerned and our staff were instructed accordingly.

GEMÜ ensures, in this way, that the measures introduced into the company are maintained and as result of this, that the minimization of the risk of transmission of TSE/BSE pathogens is guaranteed.

The company undertakes to actively work on further optimization of this product requirement in the future.
