

GEMÜ 660

Pneumatically operated diaphragm valve

Features

- Easily adjustable, integrated opening stroke and closing stroke limiter
- Precise stroke scale (10 scale points per turn) on the actuator top
- High level of reproducibility of the flow rates thanks to distance sleeves integrated in the shut-off diaphragms
- Fast cycle duties due to minimized filling volume

Description

The GEMÜ 660 2/2-way diaphragm valve has a stainless steel piston actuator and is pneumatically operated. The valve was designed for dosing and filling a wide range of products. All actuator parts are made from stainless steel (except seals). Normally Closed (NC), Normally Open (NO) and Double Acting (DA) control functions are available. An opening stroke and closing stroke limiter and an optical position indicator are integrated as standard.

Technical specifications

- **Media temperature :** -10 to 100 °C
- **Sterilization temperature:** Max. 150 °C
- **Ambient temperature:** 0 to 60 °C
- **Operating pressure :** 0 to 5 bar
- **Nominal sizes:** DN 4 to 25
- **Body configurations:** 2/2-way body | i-body | Multi-port body | Tank valve body | T-body | Welding configuration
- **Connection types:** Clamp | Flange | Spigot | Threaded connection
- **Connection standards:** ANSI | ASME | BS | DIN | EN | ISO | JIS | SMS
- **Body materials:** 1.4408, investment casting material | 1.4435 (316L), forged material | 1.4435 (BN2), forged material | 1.4435, investment casting material | 1.4539 (904L), forged material
- **Diaphragm materials:** EPDM | PTFE/EPDM
- **Conformities:** 3A | BSE/TSE | CRN | EAC | EHEDG | FDA | Oxygen | Reg. (EU) No. 10/2011 | Regulation (EC) No. 1935/2004 | Regulation (EC) No. 2023/2006 | TA Luft (German Clean Air Act) | USP

Technical data depends on the respective configuration

1	Position indicator	
2	Control air connectors	
3	Diaphragm	EPDM PTFE/EPDM (one-piece)
4	Valve body	1.4408, investment casting 1.4435, investment casting 1.4435 (F316L), forged body 1.4435 (BN2), forged body, $\Delta Fe < 0.5\%$ 1.4539, forged body
5	CONEXO body RFID chip (see Conexo information)	
6	CONEXO diaphragm RFID chip (see Conexo information)	
7	CONEXO actuator RFID chip (see Conexo information)	
8	Pneumatic actuator	Stainless steel

Note:

The GEMÜ 660 diaphragm valve was specially developed for applications in the drinks filling sector. It is therefore important that the same volume of medium flows through the valve for each opening procedure without any additional control systems. To guarantee this behaviour, the diaphragm is equipped with four distance sleeves, meaning that equal compression of the diaphragm is achieved for each installation.

After a sterilization cycle, it may be necessary to retighten the diaphragm as a result of their material-related setting behaviour. However, this is not possible using distance sleeves. Experience has shown that, after a sterilization cycle, the diaphragm is completely replaced during filling processes in the beverages sector, which means that it is not necessary to retighten the diaphragm. If you want to use the valve in processes that have sterilization cycles, it can also be operated with a diaphragm that has no distance sleeves. However, this diaphragm must be ordered separately. The above-mentioned advantage to using distance sleeves does not apply in this case.

GEMÜ CONEXO

The interaction of valve components that are equipped with RFID chips and an associated IT infrastructure actively increase process reliability.

Thanks to serialization, every valve and every relevant valve component such as the body, actuator or diaphragm, and even automation components, can be clearly traced and read using the CONEXO pen RFID reader. The CONEXO app, which can be installed on mobile devices, not only facilitates and improves the "installation qualification" process, but also makes the maintenance process much more transparent and easier to document. The app actively guides the maintenance technician through the maintenance schedule and directly provides him with all the information assigned to the valve, such as test reports, testing documentation and maintenance histories. The CONEXO portal acts as a central element, helping to collect, manage and process all data.

For further information on GEMÜ CONEXO please visit:

www.gemu-group.com/conexo

Ordering

GEMÜ Conexo must be ordered separately with the ordering option "CONEXO".

Availability

Availability of grades of surface finish

Ra acc. to DIN EN ISO 4288 and ASME B46.1

- 1) Surface finishes of customized valve bodies may be limited in special cases.
- 2) Or any other finishing method that meets the Ra value (acc. to ASME BPE).
- 3) The smallest possible Ra finish for pipe connections with an internal pipe diameter < 6 mm is 0.38 µm.
- 4) When using these surfaces, the bodies are marked according to the specifications of ASME BPE.
The surfaces are only available for valve bodies which are made of materials (e.g. GEMÜ material codes 40, 41, F4, 44)) and use connections (e.g. GEMÜ connection codes 59, 80, 88) according to ASME BPE.
- 5) Not possible for GEMÜ connection code 59, DN 8 and GEMÜ connection code 0, DN 4.

Technical data

Medium

Working medium: Corrosive, inert, gaseous and liquid media which have no negative impact on the physical and chemical properties of the body and diaphragm material.
 The valve will seal in both flow directions up to full operating pressure (gauge pressure).
 For special oxygen version (code S): only gaseous oxygen

Control medium: Inert gases

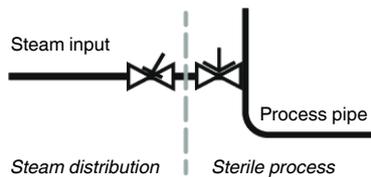

Temperature

Media temperature: Drinks filling -10 – 85 °C
 Other applications -10 – 100 °C

Diaphragm material	Standard	Special version for oxygen
EPDM (code 3A/13)	-10 – 100 °C	0 – 60 °C
PTFE/EPDM (code 54)	-10 – 100 °C	0 – 60 °C

Sterilization temperature: EPDM (code 3A/13) max. 150 °C, max. 60 min per cycle
 PTFE/EPDM (code 54) max. 150 °C, constant temperature per cycle

The sterilization temperature is only valid for steam (saturated steam) or superheated water.
 If the sterilization temperatures listed above are applied to the EPDM diaphragms for longer periods of time, the service life of the diaphragms will be reduced. In these cases, maintenance cycles must be adapted accordingly.
 PTFE diaphragms can also be used as steam barriers; however, this will reduce their service life. This also applies to PTFE diaphragms exposed to high temperature fluctuations. The maintenance cycles must be adapted accordingly. GEMÜ 555 and 505 globe valves are particularly suitable for use in the area of steam generation and distribution. The following valve arrangement for interfaces between steam pipes and process pipes has proven itself over time: A globe valve for shutting off steam pipes and a diaphragm valve as an interface to the process pipes.

Ambient temperature: 0 – 60 °C

Control medium temperature: 0 – 60 °C

Storage temperature: 0 – 40 °C

Pressure

Operating pressure:

MG	DN	Actuator version (code)	Diaphragm material	
			EPDM	PTFE
8	4 - 15	0T1, 0R1	0 - 5	0 - 5
10	10 - 20	1T1, 1R1	0 - 5	0 - 5
25	15 - 25	2T1, 2R1	0 - 5	0 - 5

MG = diaphragm size

All pressures are gauge pressures. Operating pressure values were determined with static operating pressure applied on one side of a closed valve. Sealing at the valve seat and atmospheric sealing is ensured for the given values.

Information on operating pressures applied on both sides and for high purity media on request.

Observe control pressure / operating pressure diagram

Pressure rating:

PN 16

Leakage rate:

Leakage rate A to P11/P12 EN 12266-1

	20	6.3	7.0	7.0	7.0	-	4.4	13.2	10.0
	25	13.9	15.0	15.0	15.0	12.6	12.2	16.2	14.0

MG = diaphragm size, Kv values in m³/h

Kv values determined in accordance with DIN EN 60534 standard, inlet pressure 5 bar, Δp 1 bar, stainless steel valve body and soft elastomer diaphragm. The Kv values for other product configurations (e.g. other diaphragm or body materials) may differ. In general, all diaphragms are subject to the influences of pressure, temperature, the process and their tightening torques. Therefore the Kv values may exceed the tolerance limits of the standard.

The Kv value curve (Kv value dependent on valve stroke) can vary depending on the diaphragm material and duration of use.

Product compliance

Machinery Directive: 2006/42/EC

Pressure Equipment Directive: 2014/68/EU
